Chapter 1

Introduction

1.1 Introduction

C is a general-purpose high-level language that was originally developed by Dennis Ritchie for the Unix operating system. It was first implemented on the Digital Equipment Corporation PDP-11 computer in 1972.

The Unix operating system and virtually all Unix applications are written in the C language. C has now become a widely used professional language for various reasons.

- Easy to learn
- Structured language
- It produces efficient programs.
- It can handle low-level activities.
- It can be compiled on a variety of computers.

1.2 Design Goals/Objective

Utilizing the advanced features of C, this Cyber Management System application has been built.

The program is responsible for the management of settings and client request. On the other hand, the client part gives clients in cyber access to the services provided by the place.

So, Cyber Cafe Management System interconnects different computers in a Cyber Cafe, and allows users to communicate over the computer network. It aims at managing Cyber Cafe with multiple clients and provide the clients service access.

In this cyber cafe management system project, clients can use the facilities provided by the Cyber Cafe.

Chapter 2

Implementation of the Project

2.1 Algorithms

- Admin and user login option
- Admin login with Username and Password
- Insert, View, Search, Delete functions for admin.
- Save records with date and time
- Login as user without username and password

2.2 Code

```
#include<stdio.h>
#include<conio.h>
#include<string.h>
#include<stdlib.h>
#include<time.h>
#include<math.h>

void heading();
void main_heading();
void menu();
void user_menu();
void insert();
void display();
void search();
void delete();
void main()
{
    char name[30];
    int id;
    int ch;
```

```
char username[20];
char password[20];

system("CLS");

heading();

printf("\n\n\t\t\t\t\t1) Login as Admin");
printf("\n\t\t\t\t\t2) Login as user");
printf("\n\n\t\t\t\t\tEnter your choice (1/2) : ");
scanf("%d",&ch);

system("CLS");

switch(ch)
{
case 1:

    system("CLS");

    heading();

    printf("\n\n\t\t\t\t\t||    ADMIN LOGIN    ||\t\t\t\t");
    printf("\n\n\n\t\t\t\t\tUsername :");
    scanf("%s",&username);
    printf("\t\t\t\t\tPassword :");
    scanf("%s",&password);

    if(strcmp(username, "admin")==0)
    {
        if(strcmp(password,"admin123")==0)
        {
            system("CLS");
            main_heading();
            printf("\n\n\t\t\t\t\tLOGIN SUCCESSFULL!!!");
            menu();
        }
        else
        {

```

```

        printf("\t\t\tIncorrect Password !!! Failed to Login");
    }
}
else
{
    printf("\t\t\tUsername is invalid !!! Failed to Login");
}

break;
case 2:

Chapter 3

Conclusion

3.1 Learning Outcome

The Cyber management system is designed for insert, display, search and delete user information. Also, login for user which is easy.

From this project, I have learnt to implement a few C concepts in the future projects such as functions, switch statement, loops, arrays, pointers and structures in the program.

3.2 Future Scope

- This project can be used in Cyber Cafe
- I added database to this project to store all user information.
